

May 2016 Newsletter

1 Welcome

Welcome to the May 2016 newsletter from the Telecare Learning and Improvement Network.

Our news service has been available since October 2005. Our Housing LIN and Telecare LIN membership database exceeds 40,000 people from around the world.

From January 2016 we are now back with a monthly Telecare LIN roundup as well as maintaining weekly headlines together with daily news via Twitter (follow @clarkmike and #TLINnews).

As in the past, we will be continuing to bring you an extensive curated coverage of digital health and technology enabled care references from the UK and around the world including telehealth, telecare, mobile health, telemedicine, ehealth, smart home technologies and Internet of Things. We will also be including more in the future on health informatics (including electronic health and care records), big data, artificial intelligence as well as health and care robotics.

The NHS Hospital deficit in England is £2.45 billion 2015-2016 and CIPFA suggest that there could be a £10bn gap by 2020 as it struggles to make £22bn in planned efficiency savings. This month's headlines warn us of increasing delays in health and care – hospital discharges, hospital wait times, carer and mental health assessments – could technology support better processes? Hopefully the National Information Board has some of the answers. Remember the NIB's workstreams and six priorities? – There are now 33 programmes across ten domains – will this speed up transformation across health and social care and improve outcomes? Meanwhile in London a wide range of organisations got together for the first 'Joined Up Digital' event at the Centre for Ageing Better – a big opportunity to share and collaborate on digital programmes that could benefit real people. TSA members also got together in May for their annual summit to plan out their activities for technology enabled care with a focus on 'connected care, connected homes and connected communities'.

Upcoming events include Financial Times Digital Health in June, the King's Fund's Digital Health and Care Congress in July as well as a recently announced series of workshops on virtual reality in health and care.

We've got over 750 links in our May news roundup – we hope you will find much of interest.

1 Main News Items

1.1 National Information Board outlines its plan for digital health and care

More information is now available from the recent National Information Board (NIB) meeting held in April 2016. The NIB has set out 33 programmes and 10 domains as the basis of its current work programme on digital health and care.

A Self Care and Prevention

Self-Care and Prevention: We will deliver the online services that patients need to take control of their own care, which will reduce the pressure on front line services.

- 1 Citizen Identity
- 2 NHS.UK
- 3 Health Apps Assessment & Uptake (inc wearables)
- 4 Widening Digital Participation

B Urgent and Emergency Care

We will help to deliver the national urgent and emergency care strategy by providing the digital infrastructure, algorithms and pathways we require.

- 5 Clinical Triage
- 6 Platform Patient Relationship Management
- 7 Access to Service Information
- 8 Out of Hospital Care

C Transforming General Practice

We will use technology to free GPs from time consuming administrative tasks and provide patients with online services

- 9 General Practice Operational Systems and Services
- 10 Adopting Existing Technologies in General Practice
- 11 Technology for General Practice Transformation
- 12 GP Data for Secondary Uses

D Integrated Care

We will better inform clinical decision making across all health and care settings by enabling and enhancing the flow of patient information

- 13 Integrated Care – Business Change

- 14 Integrated Care – Interoperability and Architecture
- 15 Social Care Integration
- 16 Personal Health Record

E Digital Medicines

We will enable and improve pharmacy decision making and outcomes by providing patients and prescribers with streamlined digital services.

- 17 Digitising Community Pharmacy
- 18 Pharmacy Supply Chain and Secondary Uses
- 19 Integrating Pharmacy Across Care Settings

F Elective Care

We will improve referral management and provide an improved treatment choice for patients by automating referrals across the NHS

- 20 Digital Referrals

G Paper Free at Point of Care

We will create an NHS “paper free at the point of care” by driving up levels of digital maturity and by enabling the NHS workforce to better utilise the benefits of digital technology.

- 21 Driving Digital Maturity
- 22 Digital Child Health
- 23 Digital Diagnostics
- 24 Workforce and Professional Capabilities

H Data Outcomes for Research and Oversight

Data Outcomes for Research and Oversight: We will deliver the health and care information and insight which is fundamental to informed policymaking, commissioning and regulation by improving information collections, analysis and reporting.

- 25 National Data Services Development
- 26 Data Content (inc. GP data, PLICS and PCOMS)
- 27 Innovative uses of Data

I Infrastructure

We will enable information to move safely and securely across all health and care settings by providing robust and future-proofed national systems and networks.

- 28 Digital Interoperability Platform and Spine
- 29 NHSmail2
- 30 HSCN
- 31 WiFi

J Public Trust and Security

We will provide the means for citizens to set their consent preferences. We will provide confidence that clinical and citizen information is held safely and securely and protect health and care systems from external threats.

- 32 Cyber-Security National
- 33 Opt-Out Model

1.2 Record £2.45bn deficit in England's NHS Hospitals

England's hospitals have run up a record deficit of £2.45bn according to figures from NHS Improvement compared to £822m in 2014-15.

The figures may actually be higher as some late accounting adjustments have been made to try and contain the overspend.

Barts Health in London, the NHS's largest trust, posted the biggest deficit of all (£134.9m) – almost a tenth of its £1.5bn turnover to cover agency staff and PFI costs.

In the [Guardian](#), Chris Hopson, the chief executive of NHS Providers, which represents hospital trusts, said: "The report reveals how the combination of increasing demand and the longest and deepest financial squeeze in NHS history is maxing out the health service. At the same time as treating the highest ever number of patients, NHS trusts are £2.45bn in the red, with 65% of providers in deficit."

"We have to rapidly regain control of NHS finances otherwise we risk lengthening waiting times for patients, limiting their access to services, and other reductions in the quality of patient care."

Hopson pointed out that Britain spent a lower percentage of its national wealth on health than France, Germany, Sweden or Greece, and that investment as a proportion of overall public spending would fall even further over the next few years to less than 7% by 2020.

In a further [report](#), the Chartered Institute of Public Finance and Accountancy (Cipfa) suggests that the NHS will exceed its budget by £10bn a year in four years' time as it struggles to make £22bn in planned efficiency savings.

1.3 Joined Up Digital

The digital work stream within the [Centre for Ageing Better aims](#) to assess the potential of digital technology to support their work in helping people to have a good later life.

This work includes:

- *Researching* what digital innovations are helping people as they age
- *Connecting* with other organisations that are working on the topic of *digital and ageing*
- *Defining* what the Centre for Ageing Better's role should be with regards to *digital and ageing* and how digital could support the plans for their initial topics

As part of this work, the Centre for Ageing Better has been linking with a number of other organisations, including [Age Action Alliance](#) and [New Philanthropy Capital](#), on a project (Joined Up Digital) to understand how access to and adoption of digital solutions with older age groups can be improved.

The Joined Up Digital project is using network mapping to assess the relationship of individuals and their family, friends and community - through to local organisations and national services to provide greater insights into how gaps in the [‘digital supply chain’](#) can be addressed.

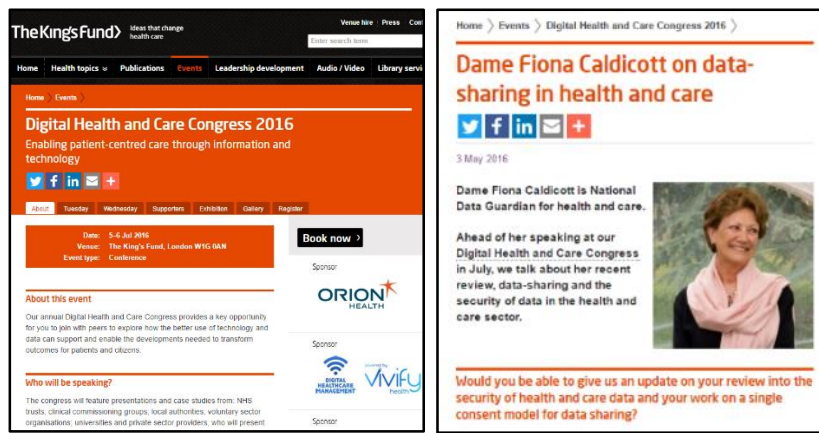

The first group meeting of Joined Up Digital took place in May to explore scenarios and potential use cases based on the Centre’s recent work with Ipsos Mori ([Later Life in 2015](#)). Robert Pye from Ethos has [blogged](#) about the event.

More information about the project can be found at <http://www.joinedup.digital/#!/project-outline/ecoxu> for those people that wish to get involved.

See also: John Popham’s blog on [Capturing Older People’s Technology Stories – Greta and Arnold](#)

1.4 Digital Health and Care Congress – July 2016

Dame Fiona Caldicott is National Data Guardian for health and care. Ahead of her speaking at The King's Fund's [Digital Health and Care Congress](#) in July, she [talks](#) about her recent review, data-sharing and the security of data in the health and care sector.

Beverley Bryant, Director of Digital Technology at NHS England, will be giving a [keynote address](#) at The King's Fund's Digital Health and Care Congress in July. Watch her [interview](#) with Matthew Honeyman on local digital roadmaps, innovation in the NHS and interoperability ahead of the event.

1.5 TSA Summit 2016

More than 160 people attended TSA's Annual Summit in Manchester on 19 May 2016 to review recent progress on Technology Enabled Care (TEC) and discuss plans for the coming years up to 2020.

The Summit was chaired by Health and Care Thought Leader and Senior Advisor to TSA, Rt Hon Paul Burstow, and included updates on TSA's [new shared narrative](#) for TEC, along with an update on the development of TSA's [Code of Practice](#).

Manchester is the focus of a major health and social care devolution project covering nearly three million people. In December 2015, an innovative project in the city aimed at improving the services for its residents was chosen as the [winner](#) of a £10m Government-led technology competition.

The CityVerve Project aims to test better services using the Internet of Things (IoT) technology. It includes plans for several cutting edge initiatives including a network of sensors in parks and along commuter routes to encourage people to do more physical activity. At the Summit, Dr Ilan Lieberman (Thematic Lead for Health & Social Care on the CityVerve Project) outlined the programme which also includes a COPD pulmonary rehab project as well as enhanced neighbourhood teams with IoT (Internet of Things) and virtual wards.

Rt Hon Paul Burstow (Summit Chair) and Alyson Scurfield (Chief Executive, TSA)

Andrew Gardner (Chair, TSA) and Dr Ilan Lieberman (CityVerve Project, Manchester)

Teams from Appletree Careline, New Forest District Council and Sandwell Metropolitan Borough Council recognised for TSA Code of Practice accreditation

A [new publication](#) reviewed the past 21 years of the organisation as well as looking to the future. Arrangements for the [International Technology Enabled Care Conference](#) for October 2016 have now been launched ([a short trailer for the event is available here](#)) and more details on registration and exhibition opportunities are available at www.iTECconf.org.uk
