

NEWSLETTER

August 2014

Welcome to the August 2014 newsletter from the Technology Strategy Board (TSB), Knowledge Transfer Network and the Telecare Learning and Improvement Network.

Launched October 2005, our free monthly newsletter is now distributed to 48,000 subscribers in the UK and worldwide via e-mail and archived at www.telecarelin.org.uk. You can also find highlights on [Rebelmouse](#) (daily) or by following Mike Clark on Twitter (@clarkmike). With over 1400 news and events links over the last month, we hope that you find this newsletter useful.

It is nearly halfway through one of the most challenging years for health and social care in the UK. Steps are being taken to address waiting lists and the quest for managing demand for urgent and emergency care continues with a recent update on the urgent care review. September and October will see some major rewrites of 151 Better Care Fund plans to take account of the changes to the pooled fund arrangements. Telecare LIN will be tracking the changes relating to digital health and care through the Autumn as well as updating the telecare map. There will be new technology announcements from Apple early in September and along with Microsoft, Google, Samsung and others there will be continuing interest in mobile health and smart home platforms. Questions continue to be asked about how data from all of the connected devices will be used to improve health and care outcomes. Also, debates continue on who would really benefit from digital health and care, particularly when surveys suggest some apps are used for just a few months. Radio 4's 'You and Yours' programme had an interesting discussion on the UK telecare and telehealth progress on 25 August – worth a listen. To keep up with the latest technology developments and service offerings, there is an extensive programme of events and conferences this Autumn including The King's Fund, Royal Society of Medicine and Telecare Services Association annual conferences (see this month's event listing).

For weekly news, updates and information, you can register with the Technology Strategy Board, [ALIP](#) group and the [dallas](#) group. You can follow the dallas programme on Twitter at @dallas_connect. You can also access a [Twitter Stream](#) via the TelecareLIN website.

A Links Supplement is available this month in two formats – [pdf](#), [doc](#)

The newsletter is Prepared by Mike Clark (Twitter: @clarkmike and <http://storify.com/clarkmike>) for the KTN, ALIP Knowledge Transfer Network and Telecare Learning and Improvement Network.

Item 1 – News from ALIP (Assisted Living Innovation Platform), the Knowledge Transfer Network, Technology Strategy Board and dallas

(i) The Long Term Care Revolution – where we are now?

THE LONG-TERM CARE

REVOLUTION

The Long-term Care Revolution was launched by the Technology Strategy Board in 2013, with the ambition of transforming the conventions, perceptions and structures on which institutional care is based, leading to a radical re-thinking of how care is provided, and opening the way for the innovation needed to deliver on this vision.

If you'd like a detailed reminder of the story so far, including information on all of the projects, please download the [Long-Term Care Revolution: Revolution to Evolution Case study](#). This is a report of an open event held on the 1st May 2014 where all the projects were invited to present their progress.

Since then, the projects have been moving forward at pace. We will be keeping you up to date with more in-depth news in future newsletters, however for now here's a reminder of who they are. This month we focus in extra detail on CASA.

(a) CASA – Connecting Assistive Solutions to Aspirations

CASA is a collaboration between Leone Services Ltd (lead), University of the West of England, Nottingham University and Sensixa Ltd.

Starting with a series of consultations with older adults, carers of those with memory problems, young people with learning difficulties and their families, the CASA team created a range of technology "enabler packages" which matched the distinct needs and aspirations of these different groups. The selected technology covers four key areas of functionality – safety monitoring, enabling independence, emergency assistance and home automation. To facilitate deployment, CASA has carried out an extensive piece of work investigating integration and interoperability across these functions.

The older adults participating in the project co-design workshops and home trials with various smart technology, such as tablet computers, mobile phones, smart watches and even a companion robot, helped us to find out if, and how, these devices could be used within the packages. Samsung donated mobile devices for this study in exchange for feedback from CASA participants on the utility and user experience of their technology. This engagement from a commercial organisation is a good indicator that major players are waking up to the market opportunity of a historically neglected customer group. The older adults group also did task-based work testing accessibility and usability of different graphical user interface mock-ups. A longer action learning trial is taking place in September for this group.

The carers of those with dementia and other memory problems are working with brochure-style material to establish some of the preferred characteristics and barriers to purchase of both consumer and assistive technology, e.g. cost, design, stigma etc.

Learners at Swiss Cottage SEN School and their families have been set up with activity trackers to help them achieve their “keeping fit” goals, and are competing against themselves and their classmates over the summer holidays. An extended home trial is taking place with a school leaver with a mobile phone and an activity tracker to investigate the potential of these consumer devices to enhance independence.

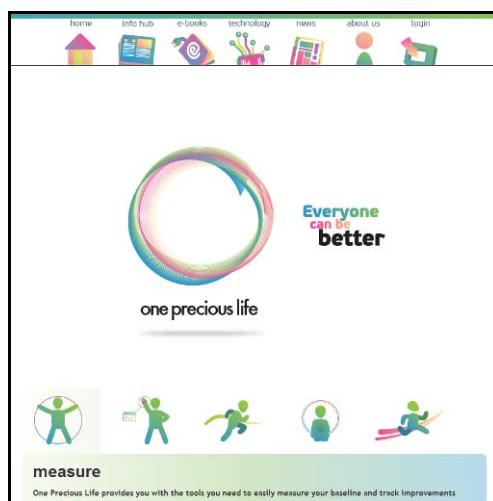

CASA has been working with the respite care manager at the school to introduce other technology to the short-breaks facility which includes smart TVs to have digital personalised welcome packages for the learners staying in the flat; and sensors, which were used in a simulated scenario to test five different use cases with an SMS alert system set up to send alerts to staff when sensors picked up certain concerning behaviours. Two further sensor trials are currently taking place in single-person dwellings.

CASA has also completed economic and business modelling, and looked in detail at privacy and security issues surrounding collecting personal data. We have received feedback from potential future customers on brand and marketing collateral, and have filmed a concept video on how technology can be used to enable independent living.

The CASA project has provided a valuable research base and helped to provide a proof of concept for a new assistive technology business planning to launch in 2015.

(b) 1 PRECIOUS LIFE

The One Precious Life program, based out of Liverpool’s Baltic Creative, has been focussing on the education, support, and motivation of individuals with Long Term Conditions so they can make their life better from many angles. To do this the project has developed accessible tools that can track wellbeing and matched these with specialist trained coaches who engage with and educate individuals with Long Term Conditions. The project will continue to provide and update online (www.onepreciouslife.com) and offline educational material.

Eight individuals have enrolled in the program and the feedback from them has been very encouraging. As the end of the nine month program approaches the focus is on development of an operations manual so the One Precious Life model can be duplicated and taken to scale.

(c) RITA – Responsive Interactive Advocate

RITA aims to harness technology from the entertainment industry to underpin new models of personal care that restore autonomy.

(d) POPPINS

In the Poppins project, the virtual currency will be given out by shopkeepers as part of a rewards scheme to drive trade in the Oak Mall Shopping centre in Greenock. The currency can be spent in a community centre that is being set up in an empty shop.

(e) FLOURISH

The Flourish project aims to reframe the concept of need, moving away from a care system that provides physical support alone, to one that focuses on wellbeing.

(f) SALTC

SALTC will provide a tool to educate people about the very real possibilities that they, or a loved one, may face the challenge of a Long Term Condition, one day in the future. The protocol the project seeks enables advance planning, to ensure individuals maintain autonomy, and to think about their later stages of life today.

(ii) Life KIC Network- Looking for Innovative Digital Health Organisations

The University of Edinburgh is leading a bid to become the co-ordinating hub of the proposed LifeKIC network (www.lifethic.eu). This network will consist of multiple parties (academic centres, public sector organisations including healthcare organisations, and industrial partners) across Europe who will collaborate to drive forward innovation along the theme of 'healthy living and active ageing'. The network will be funded by the European Institute of Innovation and Technology (EIT) and will have significant funds at its disposal to help fund suitable projects.

Although the core partners have been agreed, The University of Edinburgh are now looking to engage with a wider range of companies/organisations who could help deliver outputs from the

network should the bid be successful. Companies with an interest in the health, care, and well-being sectors, who develop, market, or are otherwise involved in new technologies and/or IT solutions for this sector are of great interest. At this stage, all that is required is a letter of support from such companies, although in the longer term there will be scope to engage in more detail.

Should you be interested in supporting this bid, please visit the KTN pages to download the letter of support to complete along with an 'elevator pitch' and 'vision statement' which provide more detail about the project.

Please note, the bid submission deadline is mid-September 2014. **Letters of support must be submitted by the end of the first week in September.**

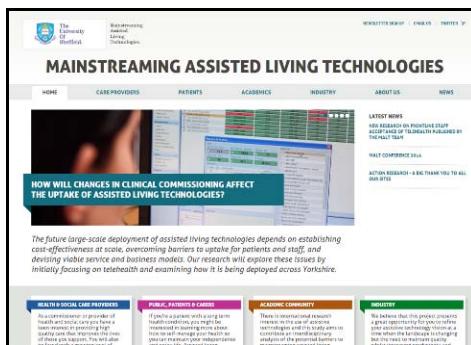

(iii) Ambient Assisted Living Forum 2014 (9-12 September 2014)

The **AAL Forum** is the annual platform for the increasing European AAL community to meet and discuss several topics, relevant for improving the AAL JP as well as the adoption of AAL solutions in the market. It is an initiative of the [AAL Joint Programme](#). ([website](#), [register](#)).

(iv) MALT Conference (30 September 2014, Sheffield)

The MALT Conference 2014, 'The challenges and opportunities of mainstreaming technology enabled care services' will take place on 30th September at the Source at Meadowhall, Sheffield, S9 1EA.

The conference is for healthcare professionals, policy makers and commissioners, technology industry, charities and researchers interested in the future of technology enabled care services.

Highlights of the day will include:

- Key messages from the MALT study
- Testing of financial and business models, user acceptance and adoption tools
- Diverse perspectives on the challenges and opportunities of technology enabled care
- Networking and learning opportunities

For more information or to register please [click here](#)

(v) Arthritis UK Marketplace Conference (Nottingham, 17 October 2014)

[Register to join us](#) as a delegate, potential exhibitor of a new idea or a corporate sponsor for the Arthritis Research UK Marketplace 2014, a unique event for everyone interested in or directly involved in innovation to help improve the lives of people impacted by arthritis.

The event aims to speed up the realisation of ideas and maximise the impact for people affected by arthritis, improving quality of life.

There will be multiple opportunities to meet people involved in the funding, design, development, manufacture and sale of innovations that can help people with arthritis live pain-free, independent lives. You'll be able to:

- share ideas and identify gaps in the market
- network with and learn from the experts and important industry figures
- express an interest in specific areas of product development
- gain valuable market insight and understanding to aid future product development
- access support networks.

For more information [click here](#)

(vi) Innovate 2014 (London, 5-6 November 2014)

Our annual innovation, networking and exhibition event, in partnership with [UK Trade & Investment](#) (UKTI), is an opportunity to meet others from business, government and academia and make innovation happen.

We're currently building an exciting programme that will stimulate opportunities for innovation, export and investment for the UK's most innovative companies.

Come along to Innovate UK 2014, the UK's largest innovation event, for opportunities to:

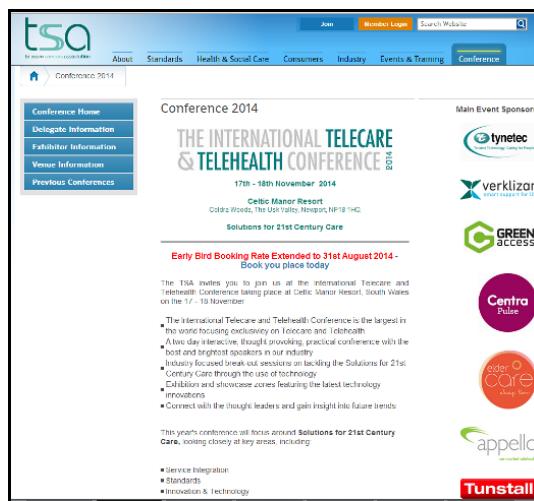

- Connect with other businesses
- Showcase your innovations and share latest thinking with the business community
- Develop ideas and explore collaborative opportunities across global markets
- Network with UK and international business, government and academia

[Register here](#) for Innovate 2014.

(vii) Telecare Services Association (Newport, 17-18 November 2014)

The [TSA](#) invites you to join us at the International Telecare and Telehealth Conference taking place at Celtic Manor Resort, South Wales on the 17 - 18 November 2014.

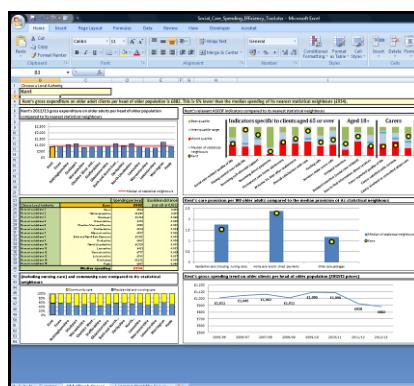

- The International Telecare and Telehealth Conference is the largest in the world focusing exclusively on Telecare and Telehealth
- A two day interactive, thought provoking, practical conference with the best and brightest speakers in our industry
- Industry focused break-out sessions on tackling the Solutions for 21st Century Care through the use of technology
- Exhibition and showcase zones featuring the latest technology innovations
- Connect with the thought leaders and gain insight into future trends

For more information [click here](#)

Item 2 – UK policy announcements

Here is a roundup of UK policy news over the last month. A fuller listing is available in the supplement ([pdf](#), [doc](#)).

- (i) The Department of Health has [announced](#) social care grants for 2014-2015, in addition to these grants there is the [Care Bill Implementation Grant](#).
- (ii) ‘Learning from the best to make the NHS better’ - Sir David Dalton [writes](#) about the importance of the NHS sharing and learning from best practice, whether from inside or outside the NHS. The Dalton Review [consultation](#) ends on 31 August 2014.
- (iii) The Department of Health has made [available](#) business plan input and impact indicator data for 2014 to 2015.
- (iv) [From the Department of Health](#): Over 70 delegates from across the UK and Commonwealth gathered at Healthcare UK’s Digital Health Forum to explore the continuing development of digital health around the world. The Digital Health Forum was the first opportunity for Public Health England, GSK and BUPA to discuss their involvement with the [Be He@lthy Be Mobile](#) programme. Be He@lthy Be Mobile is led by the World Health Organisation (WHO) and the International Telecommunication Union (ITU). It’s developing best practices and bringing them to scale for NCDs including diabetes, cancer, cardiovascular and chronic respiratory diseases. (Also - [Healthcare UK review of 2013-14 and business plan for 2014-15](#) and [Healthcare UK reports significant progress in its first 18 months](#)).
- (v) A pathfinder [programme](#) is being established for mutuals in health.
- (vi) The Department of Health is [seeking](#) views on how the NHS outcomes framework could be improved – consultation closes on 12 September 2014.
- (vii) The adult social care [efficiency tool](#) identifies similar areas (or ‘statistical neighbours’) for adult social care delivery for older people and working age adults with learning disabilities. These are the two largest groups who receive adult social care. The comparable indicators include spending per head, quality of services and access to services. The tool provides a basis for comparing spending and outcomes between councils and helps directors of adult social services and local authority financial leads to find new opportunities for improving adult social care efficiency.

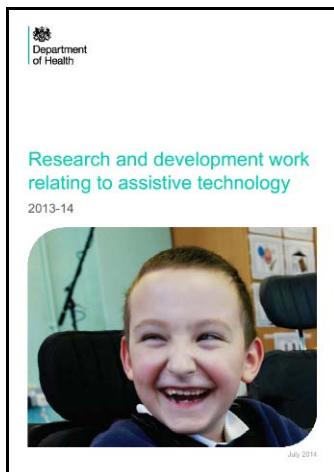

(viii) [NHS waiting times: job not done](#) – additional funding for treatments has been agreed by the Department of Health to reduce long waits.

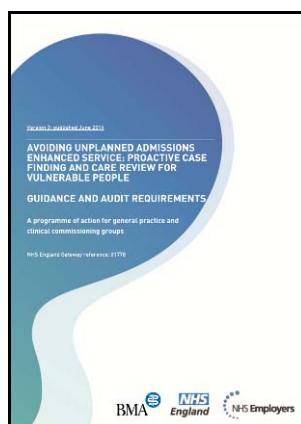

(ix) The NHS Constitution has been [updated](#).

(x) The Department of Health has [published](#) Care Act 2014: funding allocations for new adult social care duties – the consultation closes on 9 October 2014.

(xi) The Department of Health has [published](#) ‘Research and development work relating to assistive technology 2013-14’.

(xii) NHS England along with NHS Employers and BMA has published '[Avoiding unplanned admissions enhanced service: Proactive case finding and care review for vulnerable people](#)'.

(xiii) NHS England has [announced](#) Volunteer groups to get £2m to support vulnerable patients this winter. Up to eight voluntary sector organisations will share £2m to provide extra help over the busy winter months. The groups, including Age UK, British Red Cross and Royal Voluntary Service, will run local projects that target those people most at risk of admission to hospital and who need extra support when they are discharged, such as older people living alone without a support network.

(xiv) [Update on Urgent and Emergency Care Review](#) - NHS England has [published an update on the Urgent and Emergency Care Review](#), which builds on NHS England's future vision for urgent and emergency care in [Transforming urgent and emergency care services in England. Urgent and Emergency Care Review End of Phase 1 Report](#). This update sets out what the Review has been doing since they last reported in November 2013. It reports on progress with NHS England's work with local commissioners and the development of their five year strategic and two year operational plans as well as updates on planning to develop demonstrator sites to trial new models, including the new NHS 111 service specification.

(xv) NHS England has set out a '[NHS Five Year Forward View \("5YFV"\)](#)' – this covers, purpose, outcomes and workstreams.

(xvi) NHS England are [consulting](#) on improving access to information formats such as 'easy read' and braille and to British Sign Language interpreters.

(xvii) More than half of patients (51 per cent) were aware of their legal right to choose a hospital or clinic for an outpatient appointment, and a similar proportion (53 per cent) referred for an outpatient appointment first had a discussion with their GP about where to receive treatment. Fewer than two fifths of patients, however, said they were offered a choice of hospital by their GP when being referred for an outpatient appointment. These are some of the findings of a [survey](#) of over 2,700 patients conducted for NHS England and the health regulator Monitor, which looked at the number of patients being offered a choice by their GPs.

(xviii) A Better Care Fund planning [update](#) has been published ([template and other information](#)).

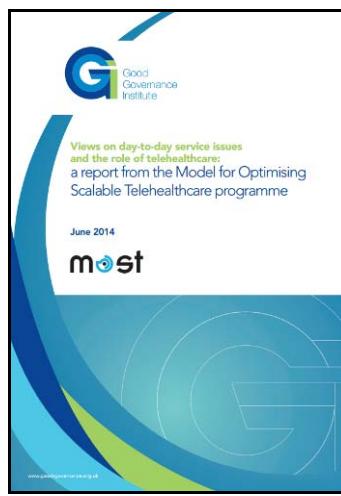

(xix) 40 million patients now have a [Summary Care Record](#) and health professionals are using them to improve and speed up patient care. NHS England is now focusing on rolling it out in A&E, NHS 111, and GP out-of-hours services.

(You can follow the Department of Health in England, Jeremy Hunt and Norman Lamb on Twitter at @dhgovuk, @jeremy_hunt and @normanlamb. In Scotland, you can follow the Scottish Government's Health Department on Twitter @scotgovhealt and Alex Neil @AlexNeilSNP (also @NHS24). In Wales follow @WelshGovernment)

Item 3 – Other news

Here is a roundup of other news over the last month. A fuller listing is available in the supplement ([pdf](#), [doc](#)).

- (i) eHealth Insider [reports](#) on the recent Urgent Care Progress report with enhancements to the 111 service including access to medical and care records, appointment booking for GP call back, home visit or ED appointment.
- (ii) The Good Governance Institute has [published](#) a report from the 'Model for Optimising Scaleable Telehealthcare' (most) programme.

- (iii) BBC 'You and Yours' Radio [Programme](#) looks at the take up of health and care technologies. Winifred Robinson visits [Mi Liverpool](#), one of four Government-funded initiatives that is being piloted across the UK and hears how people are using telecare and telehealth packages. She's joined in the studio by Dave Horsfield who runs the project, also by Claire Medd, Clinical Director for Care Innovations and Professor Trisha Greenhalgh from Barts and the London School of Medicine and Dentistry.

The image contains two side-by-side screenshots. The left screenshot is from the BBC iPlayer Radio website, showing the 'Your Yours' programme page. It displays a video thumbnail of a woman, the broadcast time (Yesterday 12:15), and a link to previous episodes. The right screenshot is from the Mi Liverpool website, which has a yellow and orange color scheme. It features a large 'IT'S ABOUT WHAT'S POSSIBLE' headline, a 'SPECIAL OFFER' section with a digital device image, and various news and success stories about telecare and telehealth.

(iv) There is a brief [report](#) at EHI on telehealth in Gloucestershire along with indications that a 'fake' telehealth company may have approached someone asking for a service payment.

(v) Age UK estimates that one in three older people in England and Wales who struggle with tasks as basic as washing and dressing get no care ([Telegraph article](#)).

(vi) 'A Whole New Meaning to 'Face Time' with Your Doctor' - Dartmouth –Hitchcock [article](#).

(vii) The CarePredict Tempo wrist-worn sensor monitors activity patterns by mapping out a general schedule of the day, and observing changes. ([Engadget article](#)).

(viii) Analysis from Ambulance Trust data suggests people are waiting for longer outside emergency departments ([BBC article](#)).

(ix) Google has released a preview software development kit (SDK) for Google Fit, the platform the company will launch later this year to help Android users aggregate data from fitness apps and devices ([Mobihealthnews article](#)).

(x) Public Health England (PHE) has [released](#) a [report](#) containing new analysis showing that men who have a large waist circumference of over 102cm are 5 times more likely to develop type 2 diabetes. Women with a large waist circumference of over 88cm are 3 times more likely to develop type 2 diabetes. Currently 90% of adults with type 2 diabetes are overweight or obese and the prevalence of both obesity and diabetes are on the increase. At present 100 people each week in the UK have a limb amputated as a result of diabetes and diabetic eye disease is the main cause of preventable blindness in the working age population in England and Wales. By 2030, the total number of adults with all types of diabetes is projected to rise to 4.6million or 9.5% of the adult population.

(xi) Airedale Hospital has [achieved](#) a milestone of 100th care home to get round-the-clock care on screen.

(xii) Recent news updates via eHealthInsider include:

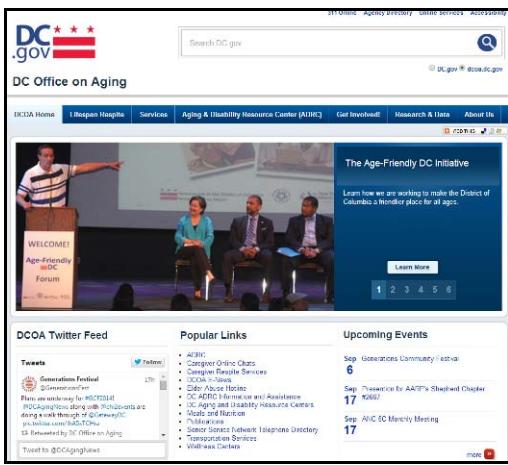

- [E-Health Insider :: 226 bids worth £360m made to tech fund 2](#)
- [E-Health Insider :: 300 Liverpool families use eRedbook](#)
- [E-Health Insider :: EHI interview: Phil Smith](#)

(xiii) Southwark Council [introduces](#) Digital Champions as part of plans to get more people online.

(xiv) A poll of 152 councils in England found nine in 10 had concerns over the cost of the new social care funding scheme. A cap of £72,000 from April 2016 means that councils will have to start assessing those who pay for their care themselves (excess of 400,000 people) to see if they qualify for help ([BBC article](#)).

(xv) Creative England is [offering](#) £1m fund for digital healthcare innovation (Closes 31 October 2014).

(xvi) There are a number of interesting programmes at the Washington DC Office of Aging website.

(xvii) Deloitte [suggests](#) there could be 100 million e-visits globally of which 75m would be in the U.S.—potentially saving \$5 billion when compared to the cost of in-person physician visits. Most of the e-visits would be capturing patient information through forms, questionnaires and photos rather than video links/remote monitoring (Report - [Deloitte - eVisits - 21st Century Housecall](#)).

(xviii) Drugs for patients with diabetes now cost the NHS in England more than £2.2m every day (10% total drugs budget) ([Independent article](#)).

(xix) A four-year project will look at 100,000 genomes to enable more personalised treatment in the future. Pilots have been set up at centres across England and the first genome was sequenced on 30 May 2014. The project has now passed the 100 genome mark, with the aim of reaching 1,000 by the end of 2014 and 10,000 by the end of 2015. ([BBC article](#)).

(xx) The replacement for the NHS Spine has gone live. Spine 2 will be used by services such as the electronic prescription service, personal demographics service, Summary Care Record application and Choose and Book. The service holds 80m demographic records, 40m Summary Care Records and is used for 16m prescriptions every month ([eHealth Insider article](#)).

(xi) In 2013-14, 344,000 people in England received a dementia diagnosis - up from 213,000 in 2006-07. The provisional figures also suggest an 8% rise in the number of recorded dementia cases since 2012-13. The rise could be due to a number of factors, including an ageing population and improved diagnosis ([BBC article](#)).

(xxii) If you are not at the King's Fund [Digital Health and Care Congress](#) (10-12 September 2014), you can follow at #kfdigital on Twitter.

(xxiii) From the [Guardian](#) - Smartwatches will revolutionise treatment for chronic conditions.

(xxiv) The [Telegraph](#) looks at lifestyle changes that could possibly reduce the risk of dementia – could technology provide support?

(xxv) The paperless NHS, Tech Fund, NHS Number, CareConnect, care.data - eHealth Insider has [reviewed](#) progress on the many targets and initiatives in UK health IT.

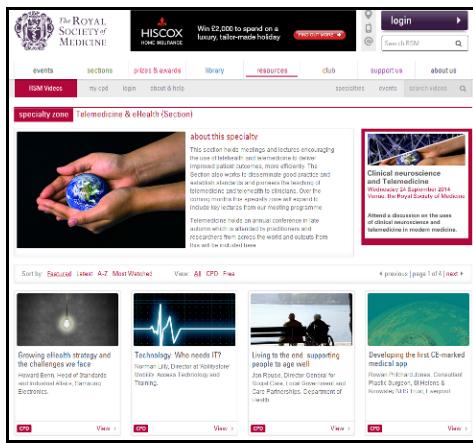

(xxvi) Intel has unveiled a 3G modem not much bigger than a penny that could be embedded in connected devices around the home including wearables and smart sensors ([BBC News](#)).

(xxvii) From the U.S. - Philips Lifeline has launched its first-ever app that acts like an mPERS. The Philips Lifeline response app will allow a one-touch call to the same response center that handles other Lifeline products via their smartphone from anywhere ([Mobihealthnews article](#)).

(xxviii) A [report](#) is now available from the recent AKTIVE conference held in Leeds ([website](#)).

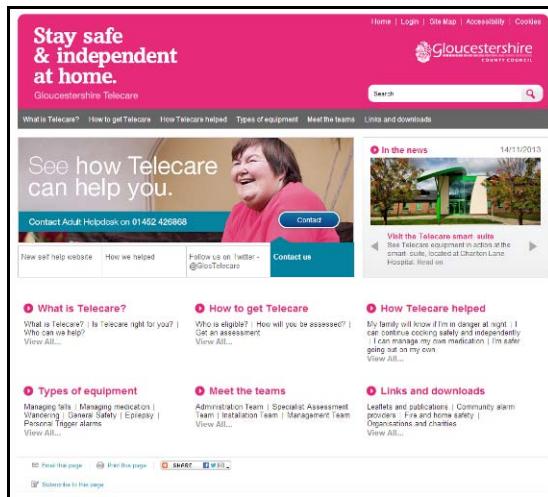

Two screenshots of the AKTIVE conference website. The left screenshot shows the homepage with a banner for 'AKTIVE: Advancing Knowledge of Telecare for Independence and Vitality in Later Life' and a photo of a conference room. The right screenshot shows a video player featuring a woman speaking, with text overlay 'Advancing Knowledge of Telecare for Independence and Vitality in Later Life project'. Both screenshots include navigation menus for 'Home', 'About us', 'Participate', 'Conference 2014', 'Communications', and 'Contact us'.

(xxix) Telemedicine and eHealth videos are now available via a new [webpage](#) at the RSM website.

(xxx) From [Forbes](#) in the U.S. - a smartphone pilot project set to launch in January 2015 for Medicaid patients involves Microsoft, TracFone and Health Choice Network and will be used for people with Type 1 and Type 2 diabetes to help manage their condition.

(xxxi) There is a new [website](#) for Gloucestershire Telecare with online self-assessment option ([Article](#)).

(xxxii) A Startup, Chemisense, is developing a wearable chemical sensor that could help asthma sufferers avoid attacks ([Technology Review Article](#)).

(xxxiii) "People in healthcare have not yet figured out how to bridge the gap between technology and care," says Manu Varma, vice president of marketing and strategy for Philips' Hospital to Home clinical programs – an interesting [article](#) at mHealth News. Also, from [MIT Technology Review](#) – 'Mobile Health's Growing Pains - Full of promise, mobile health still needs to wow patients and nail down its payoff'.

(xxxiv) From [HIT Consultant](#) - Park Associates has announced a new digital health research report revealing four digital health consumer segments based on their attitudes toward their health and healthcare solutions: Healthy and Engaged, Challenged but Mindful, Unhealthy and In Denial, and Young and Indifferent. The research found that among all U.S. broadband households, 26% are Healthy and Engaged, 25% are Challenged but Mindful, 28% are Unhealthy and In Denial, and 21% are Young and Indifferent. (Parks Associates report - [Digital Health Consumers: A Lifestyle and Technology Segmentation](#)).

(xxxv) There has been much online discussion on the recent Lancet [article](#) on GP telephone triage (ESTEEM Trial).

- [Telephone triage increases demand on GP practices](#)
- [GP phone consultations 50pc more likely to need follow-up](#)
- [Why were ESTEEM findings so different \(cf GP Access\)?](#)
- [ESTEEM, telephones and GP workload](#)

(xxxvi) Pulse Today is [reporting](#) that hypertension self-management may be included in a NICE guidelines update.

(xxxvii) 'Guess what? Doctors don't care about your Fitbit data' – interesting [article](#) from Venture Beat.

(xxxviii) 'Disability, dementia and frailty in later life - mid-life approaches to prevention' – the NICE [consultation](#) continues until 5 September 2014.

(xxxix) BBC News has a [video](#) on how Sweden cares for older people.

(Ix) From [Pulse Today](#) - Up to 25% of GP referrals could be avoided through a combination of better signposting, education, pathway redesign and use of technologies, according to the authors of an audit of referrals carried out by South Derbyshire CCG.

(ixi) Accenture looks at [five digital trends](#) fueling disruption in healthcare.

(ixii) Wearable cameras could help people with dementia and other conditions remember important events in their lives ([Guardian article](#)).

(ixiii) Intel has partnered with the Michael J. Fox Foundation focused on Parkinson's disease research, to study symptom patterns in Parkinson's patients ([Mobihealthnews article](#)).

(xiv) Jibo family robot [covered](#) in You Tube video.

(lxv) Nearly half of Kaiser Permanente's members use the 'My Health Manager' online health management platform ([Mobihealthnews article](#)).

(lxvi) From the [Telegraph](#) - Research finds that most people hit their peak confidence and understanding of technology when they are just 15 - this drops gradually up until their late 50s and then falls rapidly from 60 and beyond.

(lxvii) There are plans to increase the numbers of physician associates – what will their future role be? ([Guardian article](#)).

(lxviii) Useful publications from KPMG:

- [KPMG - Creating new value with patients, carers and communities](#)
- [KPMG - Primary Care Paradox](#)

(Ixix) Researchers at the University of Texas have identified predictors of early re-hospitalisation among patients hospitalised for complications of chronic obstructive pulmonary disease. They concluded that several modifiable factors, such as appropriate prescriptions upon discharge and early follow up after discharge from the hospital, were associated with lower likelihood of early readmission ([Medical Xpress article](#)).

(I) Visiting health coaches using mobile technology could help reduce readmissions for Medicare patients. ([Health IT outcomes article](#)).

(II) The King's Fund will be announcing the final [report](#) of the independent Commission on the Future of Health and Social Care in England (Barker Commission) on 4 September 2014.

(III) [SmartC4RE](#) – an EU project on e-health, healthy ageing, e-learning and integrated care in a rural setting.

(lvi) New - Telecura [website](#) covering telephone based assistance.

(iv) There are some interesting observations from BT Global Health's Ian Dalton on UK telecare and telehealth in this PAC [article](#).

(iv) mHealth News has a useful [article](#) on PERS mobile developments in the U.S.

PERS solutions go mobile - and fit right into the ACO model

Tweet 0 **G+1** 0 **Recommend** 0 **Share** 0

Level 1
Disengaged and overconfident
Individuals are passive and lack confidence. Knowledge is low. Goal-orientation is weak. Self-efficacy is poor. Their perspective: "My doctor is in charge of my health."

Level 2
Becoming aware, but still overconfident
Individuals have some knowledge, but large gaps remain. They believe health is largely determined by others, but can set simple goals. Their perspective: "I could be doing more."

Level 3
Taking action
Individuals have the key facts and are building self-management skills. They strive for better physical health, and are goal-oriented. Their perspective: "I'm part of my health care team."

Level 4
Maintaining behaviors and updating plan
Individuals have adopted new behaviors, but may struggle in times of stress or change. Self-care and healthy lifestyle is a key focus. Their perspective: "I'm my own advocate."

- [Mayumi Hayashi's case study on Japan](#)

The Housing LIN is working with Sitra and the University of Worcester to repeat the successful [dementia leaders course](#) for the housing sector in October 2014. You can [register](#) to receive notifications of Housing LIN publications including the September 'Housing with Care Matters' newsletter.

Item 4 – Summary list of recent journal articles and evaluations

Each month, our supplement ([pdf](#), [doc](#)) provides a comprehensive list of recent journal articles. Here are a few important links from this month's long list:

(i) Two recent studies look at telephone triage and access to medical records via GP practices:

- [The impact of patient record access on appointments and telephone calls in two English general practices: a population-based study](#)
- [Telephone triage for management of same-day consultation requests in general practice \(the ESTEEM trial\): a cluster-randomised controlled trial and cost-consequence analysis](#)

(ii) Two further papers are available on the WSD Trial:

- [Cost-effectiveness of telecare for people with social care needs: the Whole Systems Demonstrator cluster randomised trial](#)
- [Effect of telehealth on glycaemic control: analysis of patients with type 2 diabetes in the Whole Systems Demonstrator cluster randomised trial](#)

(iii) There is continuing debate about using RCTs and QALYs for cost-effectiveness in technology evaluations – here is a recent article on the subject:

[Using QALYs in telehealth evaluations: a systematic review of methodology and transparency](#)

(iv) Here is a selection of articles from this month's fuller listing in the supplement:

[A game plan: Gamification design principles in mHealth applications for chronic disease management](#)

[A mobile-phone immunization record in Ontario: uptake and opportunities for improving public health](#)

[Telemonitoring for HF Boosts Outcomes](#)

[A pilot randomised controlled trial of a Telehealth intervention in patients with chronic obstructive pulmonary disease: challenges of clinician-led data collection](#)

[Adapting heart failure guidelines for nursing care in home health settings: challenges and solutions](#)

[An economic analysis of a nurse-led telephone triage service](#)

['Better Health Choices' by telephone: A feasibility trial of improving diet and physical activity in people diagnosed with psychotic disorders](#)

[Better physical activity classification using smartphone acceleration sensor](#)

[Changes in office visit use associated with electronic messaging and telephone encounters among patients with diabetes in the PCMH](#)

[Do physical activity and dietary smartphone applications incorporate evidence-based behaviour change techniques?](#)

[Effectiveness of a smartphone application to promote physical activity in primary care: the SMART MOVE randomised controlled trial](#)

[Examining the use of telehealth in community nursing: identifying the factors affecting frontline staff acceptance and telehealth adoption](#)

[Experiences of front-line health professionals in the delivery of telehealth: a qualitative study](#)

[FDA Regulation of Mobile Health Technologies - NEJM](#)
[Feasibility, acceptability and potential effectiveness of a mobile health \(mHealth\) weight management programme for New Zealand adults](#)
[Home based telemedicine intervention for patients with uncontrolled hypertension: – a real life-non-randomized study](#)
[ICT supported healthy lifestyle interventions: design lessons](#)
[Installing Telecare, Installing Users](#)
