Happy New Year and welcome to the January 2012 newsletter from the Technology Strategy Board (TSB) Knowledge Transfer Network and the Telecare Learning and Improvement Network.

A new year brings an updated format to the newsletter with an extended audience covering health, housing and social care, third sector, independent and commercial organisations in the UK, Europe and around the world. The January newsletter has been electronically distributed to 45,000 people.

These are particularly exciting times in the world of telecare, and telehealth. There is no doubt that technology-supported, assisted living services have gained growing interest over recent months. There are a number of reasons for this discussed later in the newsletter. Of potential game-changing importance has been the publication of the headline findings from the Whole System Demonstrator Programme (WSD) in December 2011.

The WSD Programme was originally conceived back in 2006 by the Department of Health in England to address the continuing questions over the evidence base for telecare and telehealth. We are now waiting for the detailed papers and conference presentations which will help us best understand which groups of people will benefit most from this type of service and how the best outcomes can be achieved in terms of improved quality of life, reduced unnecessary hospital admissions and a range of other important indicators.

The two previous editions of the newsletter covered the announcements in the NHS Operating Framework for 2012/2013, the WSD headline findings and the ‘Three Million Lives’ initiative announced by the Prime Minister and Secretary of State for Health in December 2011. The last edition also covered the recent announcements of the Northern Ireland £18m/20,000 patient telehealth programme. If you are a new reader, these are all important policy developments and are worth reviewing.

The Technology Strategy Board is now in the final stages of selection for the DALLAS communities. Over the next three years, the programme will develop between 3-5 communities with a total of up to 50,000 users of innovative assisted living technologies and services in the UK. The eight shortlisted communities for the January 2012 workshop were:

- Community Solutions (Lead: Torbay Care Trust/HIEC SW)
- Feel Good Factory (Lead: Liverpool Primary Care Trust)
- I-Focus (Lead: ADI)
- Living It Up (Lead: NHS 24, Scotland)
- MyPAL (Lead: Rotherham Foundation Trust)
- WALES (Lead: Hywel Dda Health Board)
- Wellness Partnership (Lead: Your Homes Newcastle)
· Year Zero (Lead: Illumina Digital)

Final selection will be made over the coming weeks ready for the programme to commence in Summer 2012. Arrangements are also being put in place to network and share the learning from the communities as well as a planned evaluation of the outcomes over the three year programme.

Many of the commentators on telehealth around the World expect 2012 to be the turning point for many aspects of telemedicine, mHealth and home-based remote monitoring. We look forward to bringing you examples of progress and developments through this newsletter.

If you would like daily information, then a Twitter stream is now available at the TelecareLIN website (you do not need to register on Twitter and it is accessible to organisations not able to connect directly to social media):

Item 1: Three Million Lives to benefit from telecare and telehealth over five years – Department of Health commitment (December 2011 and January 2012)

The Department of Health has committed to support three million people with long term illness over five years through assistive technologies such as telehealth and telecare. The two previous editions of the newsletter covered the initial announcements in detail.

Prime Minister, David Cameron speaking at the Financial Times Conference in December 2011

“Just look at our approach to telehealth – getting new technology into patients’ homes so they can be monitored remotely.

We’ve trialed it, it’s been a huge success, and now we’re on a drive to roll this out nationwide. The aim – to improve three million lives over the next five years. This is going to make an extraordinary difference to people.

Diabetics taking their blood sugar levels at home – and having them checked by a nurse. Heart disease patients having their blood pressure and pulse rate checked – without leaving their home.

Dignity, convenience and independence for millions of people. And this is not just a good healthcare story. It’s going to put us miles ahead of other countries commercially too...as part of our plan to make our NHS the driver of innovation in UK life sciences”.

David Cameron Speech at Financial Times Conference (5 December 2011)

Recently, Care Minister, Paul Burstow visited Cornwall (one of the Whole System Demonstrator sites) to see services in place. Following his visit, the minister said: "The trials of telehealth and telecare have shown how people with long term conditions can live more independently, reducing the time they have to spend in hospital and improving their quality of life. The feedback I have heard from people in Cornwall has been incredibly positive. They were absolutely clear that high-tech healthcare being used here has improved their lives for the better."

There is no identifiable new Department of Health funding for telecare or telehealth within the current 2012/2013 NHS Operating Framework and the aim is to work with industry partners to cover upfront costs on the basis of an ongoing revenue stream. PCT Clusters and emerging Clinical Commissioning Groups (CCGs) are looking at how services can be reconfigured locally through the QIPP Programme – this may include telehealth initiatives. Local authorities have additionally been using some of the social care money available via the NHS to support their local telecare programmes.

There are already between 1.5 and 1.7m people with telecare in England of which a further 5-6000 have telehealth home remote monitoring. For home remote monitoring, the Veterans Healthcare Administration in the USA probably has the highest current numbers of around 67,000. Of course, many more benefit from telemedicine and other ehealth services (NHS Direct) in the UK and around the World.

Various internet articles have suggested that £500m or £750m may be required to work at scale in England. However, it is suggested that there is potential to save up to £1.2bn over five years with this investment.
Of course, there is much to consider in preparing to provide services at scale. Following publication of the WSD headline findings, Rutter and Stringer and Wyatt have suggested caution in developing plans to ensure that local conditions are favourable for scaled programmes. Also, as reported recently in the Health Service Journal (12 January 2012, online – subscription required), the Department of Health is considering the idea of a year of care tariff for telehealth technology which varies according to the number and severity of a patient’s long-term conditions. If developed, this could be included in the 2013/2014 NHS Operating Framework. The next few months will be important in developing effective business models for commissioning and provision of telecare and telehealth.

Over the coming weeks, we can expect to hear more coverage of the WSD findings and ‘Three Million Lives’ initiative at conferences and events (please check programmes for confirmation of coverage). This includes:

February 2012: Long-Term Conditions Conference 2012, 01-Feb-12, London, UK (Dame Sally Davies, Department of Health)

March 2012: The Kings’ Fund - International Congress on Telehealth and Telecare, 6-8 Mar 2012, London, UK (Professor Stanton Newman and others)

More details are expected in the coming months along with detailed, peer-reviewed papers on the WSD details for telehealth and telecare. These will be covered in the TSB/Telecare LIN newsletter and on the Twitterstream as they become available. A full events listing for UK and Europe appears in Item 4e of the newsletter.

Item 2 ALIP News

The Technology Strategy Board’s Mike Biddle (Lead Technologist for ALIP) was elected President of the Ambient Assisted Living Association AALA in September 2011 and took up his new post in November. The AALA manages the Ambient Assisted Living (AAL) joint programme under Article 185 of the EC Treaty. For more information follow: http://www.aal-europe.eu/

The Ambient Assisted Living (AAL185) 5th Call for R&D proposals was announced on 16th January. AAL Call 5 has the theme of ‘Home Care’. http://www.aal-europe.eu/calls

Any UK businesses, third sector and public sector organisations interested in partnering or leading consortia in this area are invited to forward their details to the HTMKTN for inclusion in a UK partner list that will be circulated at the AAL Call 5 launch event in Brussels during March. Keep an eye on the ALIP portal for an announcement and a link to register your organization for inclusion in the partner list, you will be asked to include details of the relevant business and R&D activities you have been involved in. A UK launch event for AAL Call 5 is also in the planning stages and will be announced through the ALIP portal soon. The ALIP Portal can be found at:

https://connect.innovateuk.org/web/assisted-living-innovation-platform-alip
Item 3 Trends for 2012

**Increasing interest in ‘tele’ services**
Across the World interest in telehealth, telemedicine, eHealth, mHealth continues to grow. In many areas ‘tele’ services are becoming the norm. For instance, there is extensive use of teleradiology for remote analysis of X-ray, CT and MRI scans. Video-conferencing in remote and rural areas of the USA and Canada are well established. Tele-stroke services allowing remote access to specialist advice for decisions about emergency administration of clot-busting drugs is continuing to grow. Information from implanted pacemakers and defibrillators can be remotely analysed to reduce clinic attendance and ensure speedy action is taken to deal with any problems. A national programme of eHealth and telehealth in Australia is championed by the Prime Minister. The United States are changing their reimbursement rules to recognise payment for telehealth consultations. Parts of Africa and India are developing innovative public health applications around mobile phones.

**A growing consumer market**
There is an increasing interest in the consumer market through health, wellness and fitness apps using smartphones and tablets and the US Food and Drugs Administration is now starting to approve medical devices connected to smartphones. Some of these devices have innovative wraparound services to increase the likelihood of continued use eg games, incentives, rewards, sharing progress with peers. There is even an example of an app that ‘fines’ the user $5 if they do not go to the gym for the time they have scheduled – the smartphone app can locate the gym through GPS and track the time!

The growing numbers of consumer products and services are generating considerable interest and raising awareness as demonstrated by the increasing numbers of health and fitness companies at the January Consumer Electronics Show in Las Vegas. As we have seen with computers, CDs, cameras and disc drives, new devices can disrupt the existing technologies by being cheaper and more fashionable. This can bring some dangers in terms of long term product use, quality and fitness for purpose. For medical devices it also raises issues of accuracy, calibration and efficacy as well as connectivity to health records and health service monitoring support. The continued use over time presents challenges for the individual user and service providers in keeping up to date with emerging technologies. Some products will fail to sell or be withdrawn – always a risk in a new market. Overall, the combination of self-tracking and self-management of health and wellness could help to significantly contribute to the health of the nation as well as earlier identification of disease.

**DALLAS and ALIP Programmes will help connect the technologies and services**
The DALLAS programme will not only develop 3-5 communities with up to 50,000 users, it is also looking at interoperability across technologies and services as well as lifestyle issues. The Assisted Living Innovation Platform (ALIP) has ongoing programmes on business modeling and social and behavioural issues. The ALIP and DALLAS programme will help establish the connectivity across telecare, telehealth, mHealth and other assisted living technologies and services together with TVs, smartphones and other intelligent devices in the home.

**The challenge for commissioners and providers**
Commissioners and service providers across health, housing and social care will need to plan carefully for their scaled programmes. Many commentators have cautioned about the importance of ensuring that services are reconfigured and where possible integrated prior to developing a scaled service. The ‘Three Million Lives’ initiative envisages that public and third sector organisations will need to work in partnership with industry and service providers to develop scalable models. The detailed reports from the WSD Programme will help us better understand the potential beneficiaries of technology-supported services allowing better planning and use of resources.
Developing an integrated approach across health and social care
The Kings Fund have published a new report to the Department of Health and the NHS Future Forum advocating closer partnership working and integrated care. *Integrated Care for patients and populations: Improving outcomes working together* is available at: http://www.kingsfund.org.uk/publications/future_forum_report.html

Item 4a: Policy, funding and trends

New funding to support prevention and reablement services

The Department of Health have announced a one-off allocation of £150m to Primary Care Trusts in England, for immediate transfer to local authorities for investment in social care services which also benefit the health system. This additional investment is intended to enable local services to discharge patients from hospital more quickly and provide effective ongoing support for people in their own homes. The aim is to reduce the pressure on health services, and particularly hospitals during the winter period.

Coupled with this, an additional £20 million will be allocated to the Disabled Facilities Grant for 2011/12, to help more people with a disability to access the aids and adaptations they require to live independently at home, saving them from an unnecessary stay in hospital or going into residential care.

For further information and to view the press release, go to:
http://www.dh.gov.uk/health/2012/01/care-services-to-receive-170m-in-additional-funding/ and
http://mediacentre.dh.gov.uk/2012/01/03/extra-money-to-help-people-leaving-hospital/

New funding to aid adoption of innovative medical technologies in the NHS
The NIHR Invention for Innovation (i4i) programme is launching a new funding stream – the i4i Challenge Awards programme. This aims to support researchers to demonstrate the healthcare benefits of their prototype medical devices in a clinical setting. The NIHR has allocated £15 million over the next three years to this new programme. The i4i Challenge Awards will hold an annual competition to address a particular ‘challenge’ facing the NHS. The first competition will open on 27 February 2012 and will address the diagnosis and monitoring of cardiovascular disease – the leading cause of death in England and worldwide. Cardiovascular disease encompasses a range of diseases...
of the heart or blood vessels including coronary heart diseases such as angina and heart attack, stroke and peripheral arterial diseases such as thrombosis. The i4i Challenge Awards will be inviting applications seeking to implement diagnostic and monitoring point-of-care devices for cardiovascular diseases into everyday clinical practice.
